[Here's the final desk statement I sent to the AP reporter.](#)

EPA Region 7 is making significant progress at the West Lake Landfill on decisions required to ensure continued protection of the public. We will continue to carry out our responsibilities to make a decision on a remedy for the West Lake site.

EPA Region 7 leadership stated in a recent news conference and several public meetings that we will announce a decision on a barrier system, in consultation with the U.S. Army Corps of Engineers this December. EPA is working closely with the USACE to conclude the engineering analysis required for this decision.

EPA will also announce a final proposed remedy for the Operable Unit 1 soils at the site by the end of 2016 that will be open for public comment.

EPA continues to work closely with federal, state and local government agencies.

Missouri Members Demand Action on West Lake Landfill

WASHINGTON, DC - Today, members of the Missouri congressional delegation, including Senators Roy Blunt and Claire McCaskill, and Representatives Ann Wagner and Wm. Lacy Clay, introduced legislation to transfer remediation authority over the West Lake landfill from the Environmental Protection Agency to the Army Corps of Engineers, putting the site in the Corps' Formerly Utilized Sites Remedial Action Program (FUSRAP).

"The EPA's unacceptable delay in implementing a solution for the West Lake landfill has destroyed its credibility and it is time to change course," said Blunt. "The Corps has the knowledge, experience, and confidence of the families living near the site. Transferring clean up efforts to its control will help move the process forward and finally give these families the peace of mind they deserve. No parent should have to raise their child in an environment where they fear for their health and safety."

McCaskill added, "The needs of this community are our top concern. We've heard loud and clear that they want the West Lake site transferred to the Army Corps of Engineers' program that oversees all other sites in St. Louis containing this World War II era nuclear waste. This legislation is not a silver bullet, and will take far longer than we'd like to resolve the many issues surrounding this site, but this is a concrete, positive step forward in a process that's been stagnant for far too long."

The bill introduced today would not alter the current liability of potentially responsible parties at the site nor its designation as a Superfund site.

The measure represents the latest step in the delegation's effort to utilize the Corps' expertise to expedite remediation at the West Lake site. In July, Blunt, McCaskill, Wagner, and Clay sent [a letter](#) to Energy Secretary Ernest Moniz asking the Department of Energy to re-evaluate whether West Lake qualified for inclusion in the Corps' FUSRAP in light of new information regarding the source of radioactive waste at the site.

"My constituents in the St. Louis region deserve a government where officials work proactively on their behalf, rather than kicking the can down the road with recurring delays and deflections," said Wagner. "The Formerly Utilized Site Remedial Action Program (FUSRAP) and the U.S. Army Corps of Engineers have an excellent track record, broad support in the community and the expertise to handle a site as complicated as the Westlake Landfill. I believe that this legislation is a crucial step in our efforts to reach a permanent solution for the people of Missouri."

Clay added, "Over a year ago, I called for the transfer of West Lake to the U.S. Army Corps of Engineers FUSRAP program. This new bipartisan legislation will bring us closer to achieving that goal.

This is a 70-year old problem and the federal government has a duty to finally do the right thing. I am totally committed to removing all the nuclear waste from West Lake landfill. It just makes no sense to allow radioactive waste to remain buried in an unlined landfill, near residential neighborhoods, schools, a hospital, the airport and the Missouri River. It's time to clean up West Lake landfill."

On February 28, 2014, the members also sent [a letter](#) to the EPA asking the agency to contract directly with the Corps to handle remediation efforts through FUSRAP, citing the Corps' "expertise in this area, and the local community's faith in the Corps' FUSRAP mission." In March of 2014, the agencies [announced](#) an agreement to work together to build a fire break at the West Lake landfill.

Subject: New Bill in Senate: R7 OPA -- West Lake Landfill Updates

I have a few updates for the team today.

I received a call from Pat Bond in Sen. McCaskill's office who shared that Sen. Blunt and McCaskill are introducing legislation today (attached) that if passed would:

To require the Secretary of the Army, acting through the Chief of Engineers, to undertake remediation oversight of the West Lake Landfill located in Bridgeton, Missouri.

On another item, yesterday Mark Hague joined the Bridgeton City Mayor during a business leaders luncheon regarding the landfill. It was a well-rounded lineup of speakers including:

- Mark Hague
- Matt Lavanchy, Pattonville Fire District Assistant Chief
- Dr. Faisal Khan, St. Louis County Health Department Director
- Chris Nagel, Missouri Department of Natural Resources

It was a productive event for the community and we heard the speakers make it clear that there is no imminent danger.

Officials reassure Bridgeton businesses on West Lake Landfill

http://www.stltoday.com/business/local/officials-reassure-bridgeton-businesses-on-west-lake-landfill/article_02af485d-9f5c-5234-b76e-8af2a4a32d31.html

Mark also visited **Pattonville School District** and met with the Superintendent yesterday.

LOOK AHEAD

We have a weekly conference call scheduled with congressional staff Friday.

Tuesday is our news conference at the Federal Building in St. Louis. The MO Attorney General will participate. We have spoken with MDNR and the USACE and offered the opportunity for them to join us even if they don't speak.
